### **REASONS FOR ALLOWANCE**

1. The following is an examiner's statement of reasons for allowance:

The prior art of record does not teach or suggest individually or in combination a method or apparatus for coordinating communications between a session configuration protocol (SCP, see definition at the specification paragraph [0004]) process and the other non-SCP processes (such as answering protocol process) in time of changing or reconfiguring an access terminal, wherein the SCP and the answering protocol processes reside concurrently in the same access terminal.

In accordance with the limitation of claim 55: an answering protocol initiates a request for changing a condition of the access terminal. The SCP process in response sends a configuration request message to a peer network SCP process and set a flag in the SCP to indicate that the SCP is waiting for a response from the corresponding peer in the network.

In accordance with the limitation of claim 62: an answering protocol initiates a request for changing a condition of the access terminal. The SCP process in response sends a command to a plurality of answering protocols operating concurrently on the same access terminal.

2. A prior art of record, US PGPub. 20020197985, uses an interface configuration module to send a request for changing configuration to a wireless network interface. In response to receiving the command, the wireless network interface communicates with an external source to obtain configuration parameters for configuring the wireless device. The relationship between the interface configuration module and the wireless network interface is a master-slave

relationship, or can be implemented in a single process controlling both hardware modules, which is different to the communications established between the concurrent processes above.
